

# NOTA INFORMATIVA

Nº 42 – Novembro 2019

## COEFICIENTE DE IGUALDADE

A fim de assegurar a igualdade de tratamento dos beneficiários do regime e de garantir o equilíbrio financeiro, o Regime Comum de Seguro de Doença (RCAM) aplica limites máximos (*plafonds*) ao reembolso de prestações de saúde. Esses limites máximos são fixados nas Disposições Gerais de Execução, de acordo com o **coeficiente de igualdade** estabelecido.

O **coeficiente de igualdade** é determinado com base em dados estatísticos suficientemente representativos das despesas com saúde apresentadas pelos beneficiários do RCAM durante o período considerado (últimos dois anos), num determinado Estado-Membro. Pretende-se que, sempre que seja aplicável um limite máximo ao reembolso, a taxa de reembolso aplicável seja idêntica à do país de referência (Bélgica, índice 1.00).

Caso não estejam disponíveis dados suficientemente representativos, o coeficiente de igualdade é determinado comparando os índices de preços em cuidados de saúde no Estado-Membro em questão com o Estado-Membro de referência. Os dados utilizados para o efeito são os do EUROSTAT. O exercício de verificação do coeficiente de igualdade tem lugar de dois em dois anos.

O coeficiente de igualdade aplicável a um Estado-Membro pode ser revisto antes do termo do período previsto de dois anos acima referido se se verificar uma variação significativa nos preços dos cuidados de saúde, que não permita reembolsos equivalentes aos do Estado-Membro de referência.

Se os preços verificados num Estado-Membro forem inferiores aos do Estado-Membro de referência, o reembolso é efectuado de acordo com o montante máximo aplicável ao Estado-Membro de referência.

Se a despesa apresentada for inferior ao limite máximo de reembolso estabelecido, o reembolso é efectuado em função do montante real apresentado.

No caso das prestações de saúde em que não é aplicável um limite máximo de reembolso mas que sejam consideradas excessivas à luz do preço normalmente praticado no país em questão, o montante considerado excessivo não é reembolsado. A parte das despesas considerada excessiva é determinada caso a caso pelo Serviço de Liquidação de Direitos em questão, após parecer do médico assessor.

A aplicação de coeficientes de igualdade não prejudica os casos especiais de reembolso previstos no Estatuto (nº1 do artigo 72º) ou na regulamentação em vigor (ex. exames de rastreio, parto, doenças profissionais).

Em anexo figuram os coeficientes de igualdade actualmente em vigor.

Utilizando como base esta informação, apresenta-se abaixo um exemplo prático da aplicação do coeficiente de igualdade.

Tomemos o caso de uma consulta de medicina geral (Ref.500):

1- Na primeira coluna, aquela em que está identificado o tipo de prestação médica (ex. 500 corresponde a uma consulta de medicina geral), figura igualmente o valor máximo de referência para o reembolso. Neste caso, seriam **Ref: 35€**,

2- Na segunda coluna, figuram os coeficientes aplicáveis a cada país. No caso de Portugal a letra correspondente é o **P**.

### Exemplos práticos

Com a aplicação dos coeficientes de igualdade, uma consulta de medicina geral tem o tecto (plafond) de 35€. O coeficiente de igualdade para Portugal é 1,75.

O reembolso máximo é de  $35 \times 1,75 = \mathbf{61,25€}$

O reembolso normal dum consulta é de 85%.

Se a consulta custar 60€ o reembolso é de **51€**.

Se a consulta custar 80€ o reembolso seria de 68€. Mas com o coeficiente de igualdade o reembolso será de **61,25€**.

NOTA: Não confundir com coeficiente corrector que é aplicável aos salários e pensões.
